Art Unit: 2454

1. The current title is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Art Rejections:

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless

(e) the invention was described in

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-36 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Ng et al, U.S. pat. No. 6,131,096.

Per claims 1 and 7-14, Ng teaches a method for configuring a client (second) device to perform data synchronization with a server (first) device comprising:

a) transmitting to the second device, via a communication connection, instructions for generating a user interface on the second device (see col 4, lines 44-50), the user interface being programmed to elicit from a user at the second device information identifying a personal information manager (PIM) used on the second device, and to transmit the information to the first device via the communication connection (col 6, lines 6-15); and

b) providing to the second device via the communication connection a synchronization package based on the PIM-identifying information, the synchronization package including a synchronization application, the synchronization application being installed on the second device, the user interface also being programmed to elicit from the user synchronization information regarding data to be synchronized, and to provide the synchronization information to the synchronization application installed on the second device (see col 7, lines 1-25).

Per claims 2-6, Ng's teachings encompass all claim limitations (see col 3, lines 52 - col 4, line 19).

Art Unit: 2454

Per claim 15, Ng teaches that the devices can communicate with each other wirelessly (see col 10, lines 26-27).

Claims 16-36 are similar in scope as that of claims 1-15 and hence are rejected for the same rationale set forth for claims 1-15.

Conclusion:

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Vu whose telephone number is 571-272-3977.
